PCB Conformal Coating – MT-1071

Molytech Products Private Limited presents MT-1071 PCB Conformal Coating, a high-quality aerosol designed to provide a thin, transparent acrylic protective layer on printed circuit boards and other electronic assemblies. This coating safeguards sensitive components against humidity, moisture, fungus, and corrosion, ensuring long-term reliability and durability of electronic devices.

Applications:

Specially developed for coating printed circuit boards (PCBs), electronic circuits, and components requiring protection against environmental factors such as humidity, moisture, and corrosion.

Features & Benefits:

- **Transparent acrylic coating** ensures protection without affecting circuit visibility
- **Shields electronic components** from moisture, humidity, and fungus
- **Prevents corrosion** for extended PCB and circuit life
- **Thin uniform layer** provides reliable insulation without adding bulk
- **Excellent adhesion** on PCB surfaces and components
- **Easy-to-use aerosol spray** enables precise, clean, and efficient application

Choose **MT-1071 PCB Conformal Coating** from Molytech Products Private Limited for dependable electronic protection, ensuring enhanced performance and extended service life of your electronic equipment.
