Moly Spray – MT-1075

Molytech Products Private Limited presents **MT-1075 Moly Spray**, a mineral oil and molybdenum disulfide (MoS_2) based aerosol specially developed to deliver long-lasting lubrication in heavy-load and high-temperature conditions. The MoS_2 suspension forms a protective lubricating film, reducing friction and wear in industrial machinery and ensuring reliable performance even under extreme conditions.

Applications:

Specially developed for lubrication of rack and pinion mechanisms, cams, and other critical moving components in textile plants and various industrial machinery operating under high load and elevated temperatures.

Features & Benefits:

- **MoS_2 suspension** provides superior load-carrying capacity and wear resistance
- **Ensures long-term lubrication** under heavy load and high temperature conditions
- **Reduces friction and metal-to-metal contact** for smoother operation
- **Improves service life** of cams, rack & pinion systems, and other industrial parts
- **Effective in textile and other industries** requiring reliable lubrication
- **Convenient aerosol spray** ensures uniform application and ease of use

Choose **MT-1075 Moly Spray** from **Molytech Products Private Limited** for dependable lubrication and protection, extending the life and performance of machinery under the toughest operating conditions.
