High Temperature Stenter Chain Oil – MT-TTF 320

Molytech Products Private Limited presents **MT-TTF 320 High Temperature Stenter Chain Oil**, a premium synthetic oil fortified with advanced additives for superior lubrication and protection of stenter chains operating under extreme conditions. Specially engineered to resist oxidation and thermal degradation, it ensures long-lasting performance, reduced maintenance, and enhanced efficiency in textile and industrial applications.

Applications:

Specially formulated for textile stenter chains, oven chains, conveyor chains, and other equipment operating in high-temperature environments. Suitable for continuous lubrication where minimal residue, clean operation, and long oil life are required.

Features & Benefits:

- Low volatility for reduced consumption and cleaner operation
- Excellent high-temperature resistance up to 230°C
- Superior oxidation stability, reducing carbon and varnish formation
- Provides long-lasting lubrication under continuous high loads
- Protects against wear, corrosion, and deposit build-up
- Extends service intervals and chain life in textile machinery

Choose **MT-TTF 320 High Temperature Stenter Chain Oil** from Molytech Products Private Limited for reliable performance, reduced downtime, and maximum protection in critical textile and industrial operations.
